Status:	New	Start date:	05/08/2026
Priority:	Medium	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Description			
Customer Interaction: Sign On door: "Text "XXX" to 928.367.2101 for Door Code" Blaze will send back: "Your Door code is [Number 1 field]. [Any Text from Custom 1]"			
For Testing, will use these first: W1B = laundromat bathroom MHB = Mtn Haven Back Ally There will be a lot more - each code stored as First Name. Code will be stored in "Number 1" field.			
The door code will just be a random 4 digits. Perhaps using something as simple as the bash script "shuf -i 1000-9999 -n 1"			
Each day, around 8am, a new code will be emailed to mgr@singo1.com to key into the new lock. The code on blaze should be updated at 9am. VA's will add the new code once email received they have an hour. Then delete out the old code some time after 9am. If the old code is active for a while, that's fine if we get busy.
