<b>Description</b> FuboTV allows for 10 simultaneous Streams .. our Sparklight acct has 5 static IP - complete overkill and no idea why old owners had this setup .. will need to simulate 3 different locations - thinking we do a different subnet for every 2 or so AP's, thus making it appear as though we are coming from multiple locations while also having one single network - doing multiple networks would be easier, but there is currently a limitation of 4 networks - we have 2 guest networks and 2 in-house networks. I guess if it came down to it, we could just have a single guest network, leaving 3 SSID's for management use.
